TOGETHER FIRST

A global system that works for all

Yes	Campaign to Stop Killer Robots	Yes
Global catastrophic risks mitigated	**Risk multipliers managed**	**Implementation timeframe**

DETAILS

Killer robots would violate international humanitarian law and bring about untold suffering. Governments must urgently launch negotiations on a new international treaty to pre-emptively prohibit fully autonomous weapons and retain meaningful human control over the use of force.

The Campaign to Stop Killer Robots is an international coalition of more than 140 non-governmental organizations and academic partners in over 60 countries with the specific goal of pre-emptively banning the development, production, and use of fully autonomous weapons, also known as lethal autonomous weapons systems, or killer robots.

The Campaign to Stop Killer Robots calls on all policymakers to create a new international treaty to pre-emptively ban fully autonomous weapons and retain meaningful human control over the use of force; and promote development of national policies and laws to implement and enforce a ban. The Campaign views such a treaty as a humanitarian imperative, legal necessity, and moral obligation.

Since the launch of the Campaign to Stop Killer Robots, a broad range and growing number of countries, regional bodies, private companies, organizations, and individuals have endorsed the call to pre-emptively ban fully autonomous weapons, including:

- Thirty countries: Algeria, Argentina, Austria, Bolivia, Brazil, Chile, China (on use only), Colombia, Costa Rica, Cuba, Djibouti, Ecuador, Egypt, El Salvador, Ghana, Guatemala, Holy See, Iraq, Jordan, Mexico, Morocco, Namibia, Nicaragua, Pakistan, Panama, Peru, State of Palestine, Uganda, Venezuela, and Zimbabwe.

- United Nations Secretary-General António Guterres, who has urged states to prohibit weapons systems that could, by themselves, target and attack human beings, calling them “morally repugnant and politically unacceptable.”

- More than 4,500 artificial intelligence (AI) and robotics experts, who signed an open letter in 2015 affirming that they have “no interest in building AI weapons and do not want others to tarnish their field by doing so.” Since then, another 30,000 individuals have signed various open letters supporting a ban on lethal autonomous weapons, including more than 14 current and past presidents of AI and robotics organizations and professional associations such as American Association for Artificial Intelligence (AAAI), IEEE Robotics and Automation Society (IEEE-RAS), International Joint Conferences on Artificial Intelligence (IJCAI), and the European Association for Artificial Intelligence (EurAI). Individual signatories include Tesla CEO Elon Musk, Apple co-founder Steve Wozniak, Skype co-founder Jaan Tallin, the late Professor Stephen Hawking, and Google DeepMind chief executive Demis Hassabis along 21 of his lab engineers, developers and research scientists. Notable female signatories include Professors Barbara Grosz of Harvard University, Martha E. Pollack of the University of Michigan, Carme Torras of the Robotics Institute at CSIC-UPC in Barcelona, and Francesca Rossi of Padova University as well as IBM Watson design leader Kathryn McElroy.

- More than 270 scientists in 37 countries, who have warned that interactions by devices controlled by complex algorithms “could create unstable and unpredictable behavior … that could initiate or escalate conflicts, or cause unjustifiable harm to civilian populations.” Signatories include Professors Geoffrey Hinton of the University of Toronto, Alan Bundy of the University of Edinburgh, Bruno Siciliano of the University of Naples, and James Hendler of Rensselaer Polytechnic Institute (former Chief Scientist of the Information Systems Office at the US Defense Advanced Research Projects Agency aka DARPA).

- More than 26 Nobel Peace Laureates, who are concerned that “leaving the killing to machines might make going to war easier.” This includes: Jody Williams, Juan Manuel Santos, Leymah Gbowee, Tawakkol Karman, Shirin Ebadi, José

Ramos-Horta, F.W. de Klerk, Rigoberta Menchú Tum, His Holiness the Dalai Lama, Oscar Arias Sánchez, Archbishop

More than 160 religious leaders and organizations of various denominations, who called killer robots "an affront to human dignity and to the sacredness of life." The signatories include South Africa's Archbishop Desmond Tutu, the Latin Patriarch of Jerusalem Fouad Twal, the Archbishop of Liverpool Rev. Malcolm McMahon, the Archbishop of Canterbury's Envoy to the United States, Russell Chandler, and the Bishop of the Evangelical Lutheran Church in Jordan and the United Kingdom. Despite these investments, there is growing recognition by the international community that there must always be human control over the use of force.
